

BTB Auto Glass Tools

The BTB Tool is a specialized reciprocal (in-out) stroke air tool which operates a range of cutting blades, designed to safely remove all automotive glass and components installed with urethane adhesive, without damage to glass or vehicle. The BTB tool will also safely remove body side mouldings, badges, emblems and other components bonded with flexible adhesives such as urethane or double-sided tape.

The BTB Tool avoids the use of force and risk of operator injury common with other tools and is endorsed by the world's leading vehicle manufacturers and user groups.

The BTB Tool incorporates a unique internal and external cutout system. It reaches the adhesive below dashboards, without damaging the dash board or pillar trims for external cutting, the powered cold knife blades replace the manual method. All BTB blades can also be operated manually in handles. This while the versatile air tool also operates as a powerful air hacksaw. The air tool is approved to CE standards with very low levels of noise and vibration.

Mentioned below are a few exclusive features of the tool:

1. Low air consumption, from min. 1 CFM (30L/min.) to max 5 CFM (140L/min.)
2. Complete portability using a small air compressor
3. Minimal noise & vibration complying to HSE and CE standards
4. In-line tool stroke & floating piston absorb tool vibration
5. Weighs only 1.1Kg (2.4Lb)
6. Moisture resistant lubricating oil for longer tool life
7. Kits also available for Bus, Truck & Trains
